

# Flow Cytometry Project Supervisor Required

The laboratory medicine program at RMIT University offers a capstone course which involves project work – where the students establish a method and test various patient samples.

We are looking for an experienced flow cytometry operator who has the capacity to devise and supervise projects for students.

Many of our demonstrators love the interaction with students and over the duration of this course the students grow in stature and confidence to become real scientists.

You will also be required to mark their literature reviews and final theses.

Casual Position until 21/12/18  
Hours: Wednesday 11:00 – 18:00  
and possibly Monday 11:00 - 18:00

Our flow cytometer is the BD FacsCanto and we can offer induction, however, preference would be given to candidates with experience with the software.

All demonstrators are required to hold a current Working With Children Check and a Valid Police Check

Please email your CV with 2 referees to
